To implement SVM/Decision tree classification techniques.

**PROGRAM CODE:****SVM IN R:**

```
# Install and load the e1071 package (if not already installed)
install.packages("e1071")
library(e1071)
# Load the iris dataset
data(iris)
# Inspect the first few rows of the dataset
head(iris)
# Split the data into training (70%) and testing (30%) sets
set.seed(123) # For reproducibility
sample_indices <- sample(1:nrow(iris), 0.7 * nrow(iris))
train_data <- iris[sample_indices, ]
test_data <- iris[-sample_indices, ]
# Fit the SVM model
svm_model <- svm(Species ~ ., data = train_data, kernel = "radial")
# Print the summary of the model
summary(svm_model)
# Predict the test set
predictions <- predict(svm_model, newdata = test_data)
# Evaluate the model's performance

print(confusion_matrix)
# Calculate accuracy
accuracy <- sum(diag(confusion_matrix)) / sum(confusion_matrix)

**Decision tree in R:**

```

test_data <- iris[-sample_indices, ]
# Fit the Decision Tree model
tree_model <- rpart(Species ~ ., data = train_data, method = "class")
```

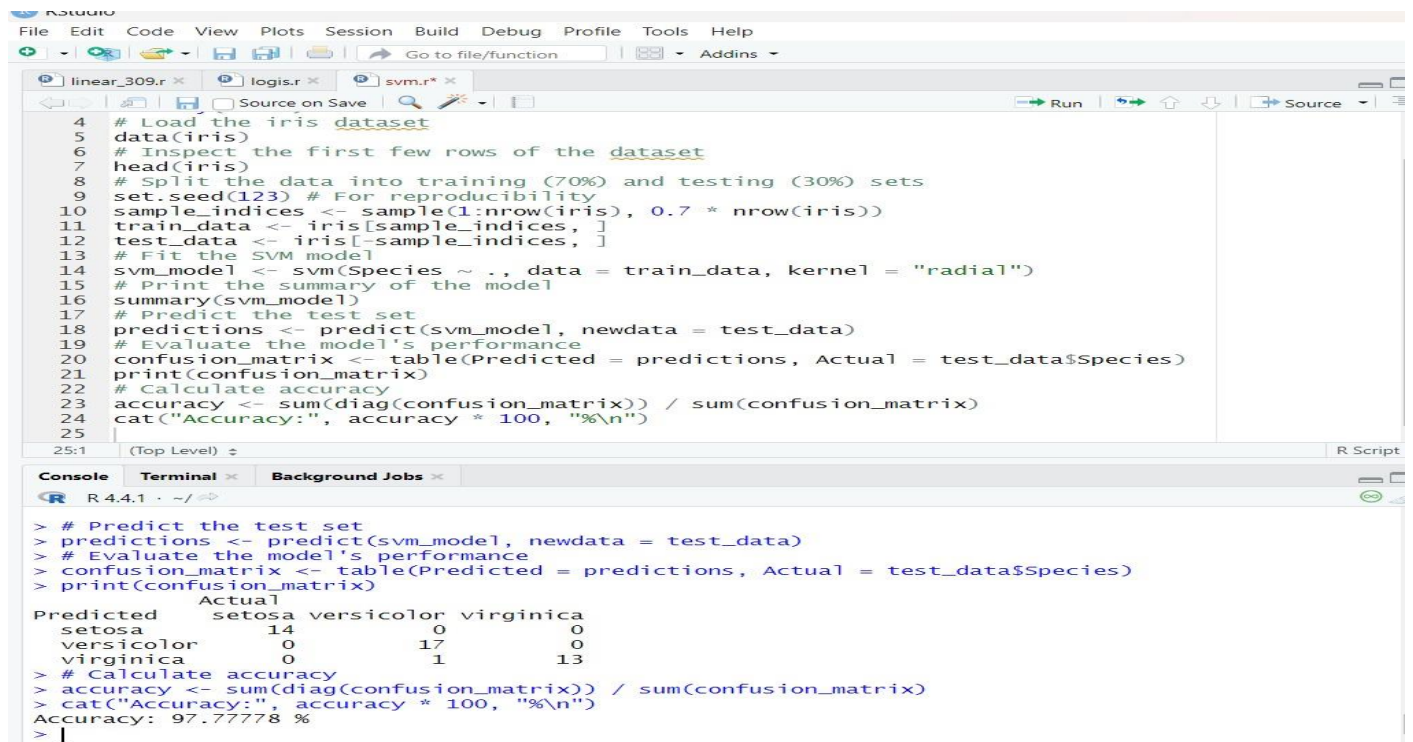

```

# Print the summary of the model
summary(tree_model)
# Plot the Decision Tree
plot(tree_model)
text(tree_model, pretty = 0)
# Predict the test set

print(confusion_matrix)
# Calculate accuracy

## OUTPUT:

## SVM in R:

The screenshot shows the RStudio interface with a script editor and a console. The script editor contains R code for loading the iris dataset, splitting it into training and testing sets, fitting an SVM model with a radial kernel, and evaluating its performance. The console shows the execution of the final steps, including the prediction of the test set, the calculation of the confusion matrix, and the resulting accuracy of 97.77778%.
